## INTRODUCTION

Porirua war stories are a website which publishes the stories of the families whose histories are connected to the Ww1, Ww2, and Boer War etc. This website contains over 500 war stories and is frequently updated. When the website is completed then the young generation is getting to know about the history of the different wars.

The main Purpose of this website is to connect with the society so that our client can share the stories of Porirua men and women who served in conflicts. This website helped the current and next generation to understand what is going on and how it transforms the world and society. Form this project we will produce a fully functional modern website. In this website we will add the features like the Admin can easily add, Delete, Modify the stories photos and description about the stories.

## DEVELOPMENT

For development of this project we have used core PHP language with MYSQL database. For the designing of the website we have used the Bootstrap, HTML5, JavaScript, AJAX. For developing this project our team has used Waterfall model as a software development method. Our project is divided in five different phases as per waterfall methodology.

### 1. Requirement Gathering & Analysis:

During this phase, we have gathered all the requirements of the project form our subject capstone project. After that we've meet the client and discuss all the

requirements and analysis it. Based on our team analysis we have come up the decision that we are going to develop this project in Core PHP with MySQL database.

### 2. System Design:

After successfully choosing the programming language and analysis the requirements, our team started work on designing the website. We have used Bootstrap 4 and HTML 5 for designing the website.

### 3. Implementation:

After completing the design, we have started working on database and backend part. In this phase our team design the database and implement backend coding.

### 4. Testing:

Once the project is completed our one of our team members stared working of testing the project. In this project we have done functional testing and prepare the test documents.

### 5. Deployment:

After successfully testing the project, final phase is deployment of the project. In which we will hand over the project to the client and institution.

## CONCLUSION

The outcome of the project. After development we are created the website that is Porirua war Stories. This website is look attractive and modern so from this website the young generation is getting to know about the history of the wars.
